Increasing Experiences Feature Awareness

A Product Case Study · Chhavi Chauhan · August 2025

PROBLEM STATEMENT

Experiences exist. Nobody knows about them.

A survey of frequent Airbnb travellers revealed critically low awareness of the Experiences feature, hurting both user engagement and host revenue.

- Awareness of the Experiences feature is extremely low among active users
- Low adoption rate directly reduces Airbnb's overall revenue
- "Experience" hosts are left with unsatisfied demand

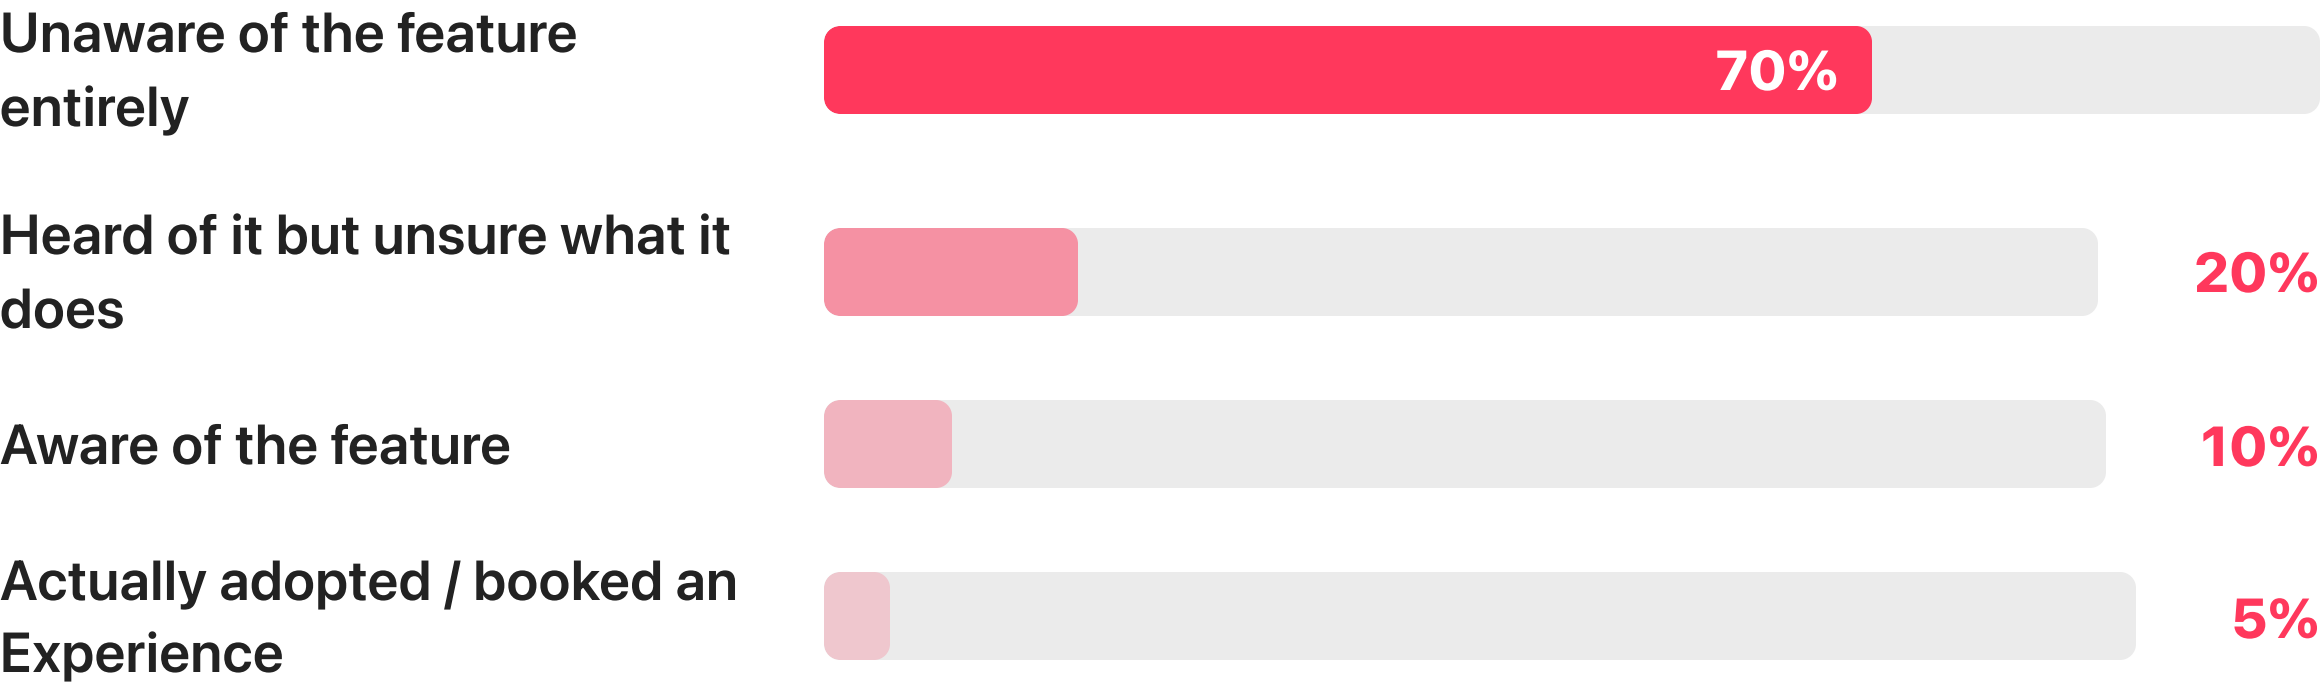

THE GAP

Experiences are hidden in plain sight

The only indicator of the Experiences tab is a subtle underline on the navigation, easily missed by most users.

PROBLEM EVIDENCE

Surveying 100 frequent Airbnb travellers

70%

of frequent travellers have never heard of Airbnb Experiences

5%

adoption rate, even among those who know the feature exists

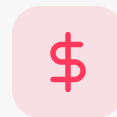

PRIMARY GOAL

Increase awareness and adoption of Experiences among active users

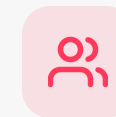

Drive engagement

Increase awareness to improve session depth and time spent within the Airbnb platform.

Grow revenue

Experiences bookings drive Airbnb's overall revenue and push users toward booking more listings.

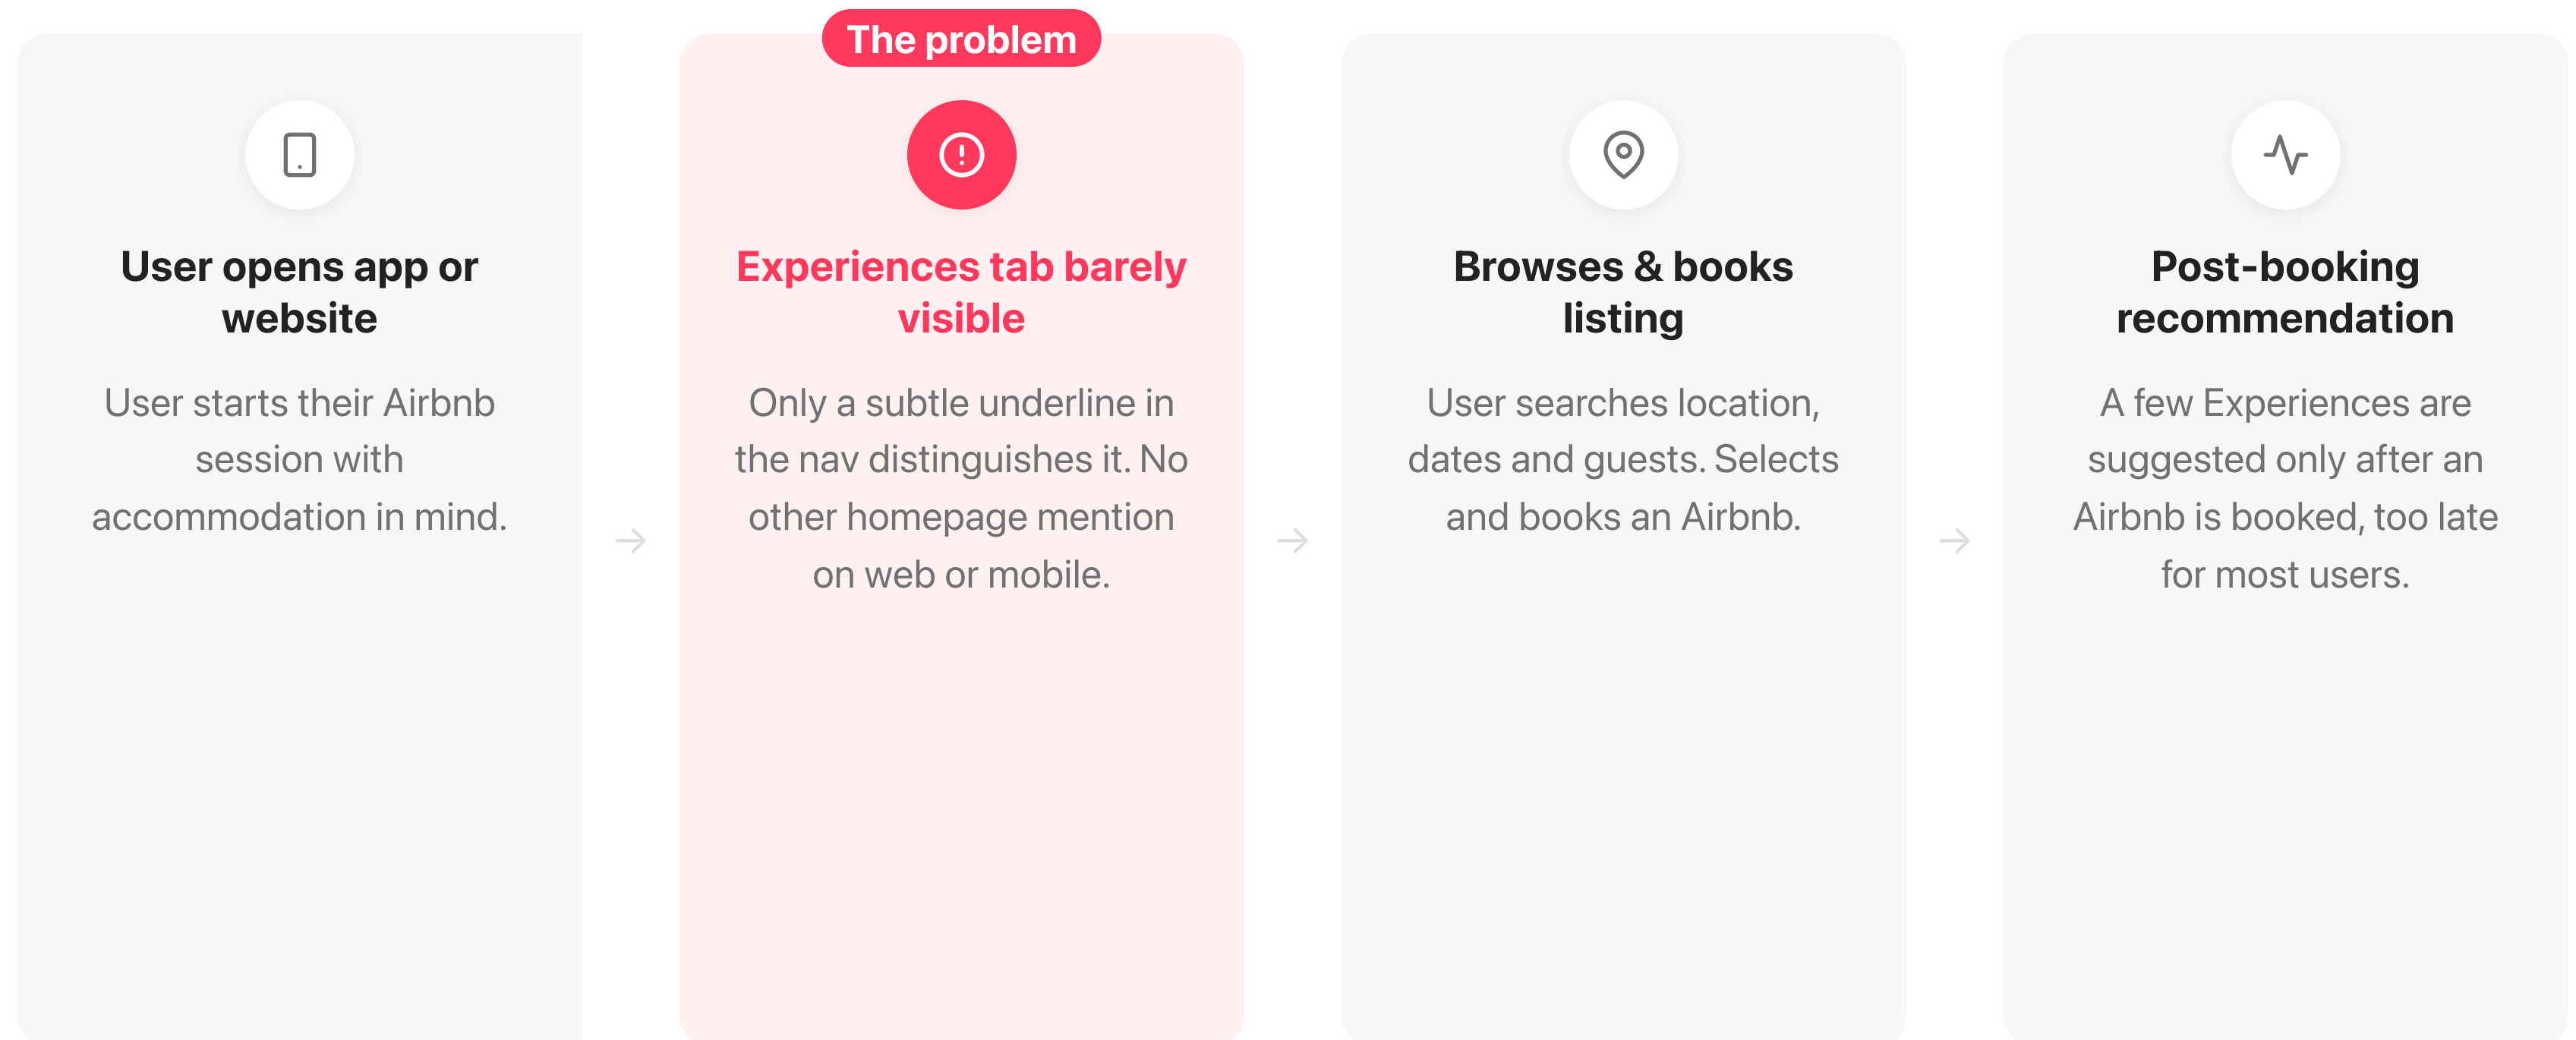

Empower hosts

More bookings directly benefit Experience hosts, improving satisfaction across both sides of the marketplace.

North Star Metric: Total Airbnb listings booked. Experiences bookings feed directly into this.

CURRENT FLOW

How users interact with Experiences today

USER PERSONAS

Two profiles; one priority

PRIORITISED

Primary Target

Individual & Group Travellers

BEHAVIOUR

Travel frequently, more than 5 times a year. Go to explore new places and meet new people.

PAIN POINT

"I spend time deciding where to go, but I end up confused about how to spend each day. I want to explore but don't know where to start."

SECONDARY

Also Served

Family Travellers

BEHAVIOUR

Travel with kids to spend quality time together. Seek activities that are fun for both adults and children.

PAIN POINT

"I don't have enough time to plan the trip, but I want a memorable experience together with the kids."

Solving for Individual/Group Travellers naturally extends benefits to this persona too.

Three ways to surface Experiences

01

Location-based Experiences under every listing

- ✓ Helps users decide to finalise a trip while still browsing
- ✓ Captures implicit preference data from thumbnail interactions
- ✓ Encourages longer stays via multi-day experiences
- Listing page already info-dense

02

Exclusive itinerary for confirmed bookings

- ✓ User is already in planning mode, timing is right
- ✓ High chance of multiple bookings
- High engineering and design effort to build itinerary feature

03

Interest pop-up with saved Experiences

- ✓ Rich preference data to power future recommendations
- ✓ Saved experiences reduce friction to re-discover
- Only works if user is willing to provide input

PRIORITISATION

RICE framework selects Solution 1

SOLUTION	REACH	IMPACT	CONFIDENCE	EFFORT	SCORE
Location-based Experiences under every listing	5	3	5	3	25
Exclusive itinerary for confirmed bookings	3	5	4	5	12
Interest pop-up with saved Experiences	5	3	4	5	12

✓ **Solution 1 wins** with the highest RICE score of **25**: high reach and high confidence at moderate effort, making it the most viable path forward.

IMPLEMENTATION

Recommended Experiences in the listing flow

- 1 User opens the app or website and **searches for a property**, entering location, dates and number of guests.
- 2 A list of matching properties is shown. User **taps a listing they like** to view its detail page.
- 3 As the user scrolls through the listing, they encounter a **horizontally scrollable row of recommended Experiences**, filtered to the listing's location and the user's selected dates.
- 4 Seeing compelling nearby Experiences **before committing to the booking** can be the nudge that converts a browsing user into a confirmed guest.
- 5 Thumbnail interactions implicitly capture **user preference data**, informing future listing and Experience recommendations.

SUCCESS METRICS

What does success look like?

METRIC	TYPE	TARGET
AWARENESS		
Unique users scrolling through Experiences on listings	L1 Metric	↑ Increase
Number of clicks on recommended Experiences	L1 Metric	↑ Increase
Number of unique Experiences explored per session	L1 Metric	↑ Increase
ADOPTION		
Experiences saved by a user	L1 Metric	↑ Increase
Experiences booked per day	North Star	↑ Increase

Drop-off rate at Awareness → Adoption will be tracked to measure funnel conversion.
